3. STATUS OF CLAIMS

Claims 1-4, 6-11, 13-17 and 19-21 stand rejected as anticipated by United States Patent No. 6,697,730 to Dickerson.

Claims 1-4, 6-11, 13-17 and 19-21 are the claims on appeal. *See*, Appendix.

## 5. SUMMARY OF CLAIMED SUBJECT MATTER

In this summary of claimed subject matter, all citations are to the specification of United States Patent Application 10/650,549 filed on August 28, 2003. Further, all citations are illustrative only and support for the cited element may be found elsewhere in the specification.

The invention relates to a method 200 (FIG. 2) for providing carpool service using a telematics system and a system 100 (FIG. 1) for implementing this method. The method of providing car pooling assistance through a wireless communication system begins with receiving a carpool enrollment request from a user (Block 210, pg. 10 lines 14-16) and then obtaining the positional information of the user's moving vehicle 110 (Block 230, pg. 10 lines 29-30). The positional information of the user's moving vehicle is stored as a route (Block 250, pg. 12 lines 5-7) in a call center database 154. The user's stored route is linked to the user's carpool enrollment request that was previously received to create a user profile (pg. 12 lines 11-14). The method continues by sending at least one available match based on the carpool enrollment request to the first user (Block 275 & 280, pg. 13 lines 16 to pg. 14 line 9).

System 100 for providing car pooling assistance through a wireless communication system includes means for receiving a user carpool enrollment request (See pg. 9 line 26 to pg. 10 line 16); means for obtaining the positional information of the user's moving vehicle (See pg. 10 line 17 to pg. 11 line 26); means for storing the positional information as a route in a call center database (See pg. 11 line 27 to pg. 12 line 15); linking the user's stored route to the received user's carpool enrollment request to create a user profile (See pg. 12 lines 11-14); and means for sending at least one available match based on the carpool enrollment request to the user (See pg. 14 lines 2-9).

June 22, 2005  
Case No.: GP-303944 (2760/129)  
Serial No.: 10/650,549  
Filed: August 28, 2003  
Page 8 of 18

**6. GROUNDS OF REJECTION TO BE REVIEWED ON APPEAL**

Claims 1-4, 6-11, 13-17 and 19-21 were rejected under 35 U.S.C. §102(e) under Dickerson.

June 22, 2005  
Case No.: GP-303944 (2760/129)  
Serial No.: 10/650,549  
Filed: August 28, 2003  
Page 9 of 18

**7. GROUPING OF CLAIMS**

Claims 1-4, 6-11, 13-17 and 19-21 should be considered as one group, standing or falling with claim 1.

June 22, 2005  
Case No.: GP-303944 (2760/129)  
Serial No.: 10/650,549  
Filed: August 28, 2003  
Page 10 of 18

## 8. ARGUMENTS

Claims 1-4, 6-11, 13-17 and 19-21 were rejected under 35 U.S.C. §102(e) as being anticipated by Dickerson.

### *Dickerson does not disclose each element of the invention*

Dickerson fails to disclose each and every element of the Appellants' invention as claimed, as required to maintain a rejection under 35 U.S.C. §102(e). *See* MPEP 2131. Therefore, the §102(e) rejection of claims 1-4, 6-11, 13-17 and 19-21 is traversed.

Dickerson fails to disclose, teach, or suggest obtaining the positional information of the user's moving vehicle, storing the positional information as a route in a call center database and linking the user's stored route to the received user's carpool enrollment request to create a user profile and sending at least one available match based on the carpool enrollment request to the first user as recited in claim 1.

The Examiner cites to FIG. 9 of the Dickerson patent to teach the claim limitations of obtaining the positional information of the user's moving vehicle and storing the positional information as a route in a call center database. However, FIG. 9, as well as the entirety of the Dickerson patent, makes it clear that the user/passenger is separate from the vehicle. FIG. 9 illustrates that the user requesting the services of a vehicle is separate and distinct from the vehicle that responds to the request. This separation between the user and the vehicle makes it clear that the Dickerson patent does not teach "obtaining the positional information of the user's moving vehicle and storing it as a route in a call center database" as recited in claim 1. Therefore, because the Dickerson patent does not teach or disclose obtaining and storing a user's route, the Dickerson patent also does not teach "linking the user's stored route to the received user's carpool enrollment request to create a user profile" as recited in claim 1.

June 22, 2005  
Case No.: GP-303944 (2760/129)  
Serial No.: 10/650,549  
Filed: August 28, 2003  
Page 11 of 18

The distinction between the user and the passenger is made more clear by the fact that the Dickerson patent merely teaches using GPS to determine the real time location of the vehicle sent to pick up the passenger (see col. 11 lines 42 to 65 and col. 14 lines 16 to 25). The Dickerson patent does not teach or suggest obtaining and storing GPS information of a user's vehicle as a "route in a call center database" as claimed by the Appellant. Dickerson merely teaches having GPS as part of the communication device of the vehicle and using the GPS information for providing real time location information for a vehicle and providing this information to a user to let the user know how close the vehicle is to a pick-up location (see col. 11 lines 62 to 65).

Therefore, claim 1 is not anticipated by Dickerson. Claims 1-4, 6-11, 13-17 and 19-21 are patentable over Dickerson.

Serial No.: 10/650,549  
Filed: August 28, 2003  
Page 12 of 18

**SUMMARY**

The Appellants respectfully submit that claims 1-4, 6-11, 13-17 and 19-21 fully satisfy the requirements of 35 U.S.C. §§102, 103 and 112. In view of the foregoing, favorable consideration and early passage to issue of the present application is respectfully requested.

Dated: June 22, 2005

Respectfully submitted,  
Christopher L. Oesterling

## 10. APPENDIX

1. (Previously Presented) A method of providing car pooling assistance through a wireless communication system, the method comprising:
  - receiving a user carpool enrollment request
  - obtaining the positional information of the user's moving vehicle;
  - storing the positional information as a route in a call center database;
  - linking the user's stored route to the received user's carpool enrollment request to create a user profile; and
  - sending at least one available match based on the carpool enrollment request to the first user.
2. (Original) The method of claim 1 wherein obtaining the positional information of the moving vehicle comprises obtaining the positional information through a global positioning system.
3. (Original) The method of claim 1 further comprising:
  - recording the positional information obtained for the moving vehicle; and
  - transmitting the recorded positional information from the vehicle to the call center.

4. (Original) The method of claim 1 wherein the positional information further comprises time information.

5. (Cancelled)

6. (Previously Presented) The method of claim 1 further comprising comparing the user profile to at least one subscriber profile, the subscriber profile including at least a carpool enrollment request.

7. (Original) The method of claim 6 further comprising generating a list of at least one subscriber profile that matches the user profile.

8. (Previously Presented) A computer usable medium including a program for providing car pooling assistance through a wireless communication system, the computer usable medium comprising:

computer program code for receiving a user carpool enrollment request

computer program code for obtaining the positional information of the user's moving vehicle;

computer program code for storing the positional information as a route in a call center database;

computer program code for linking the user's stored route to the received user's carpool enrollment request to create a user profile; and

computer program code for sending at least one available match based on the carpool enrollment request to the user.

9. (Original) The computer usable medium of claim 8 wherein the computer program code for obtaining the positional information of the moving vehicle comprises computer program code for obtaining the positional information through a global positioning system.

10. (Original) The computer usable medium of claim 8 further comprising:  
computer program code for recording the positional information obtained for the moving vehicle; and  
computer program code for transmitting the recorded positional information from the vehicle to the call center.

11. (Original) The computer usable medium of claim 8 wherein the positional information further comprises time information.

12. (Cancelled)

13. (Previously Presented) The computer usable medium of claim 8 further comprising computer program code for comparing the user profile to at least one subscriber profile, the subscriber profile including at least a carpool enrollment request.

14. (Original) The computer usable medium of claim 13 further comprising computer program code for generating a list of at least one subscriber profile that matches the user profile.

15. (Previously Presented) A system of providing car pooling assistance through a wireless communication system, the system comprising:  
means for receiving a user carpool enrollment request  
means for obtaining the positional information of the user's moving vehicle;  
means for storing the positional information as a route in a call center database;  
linking the user's stored route to the received user's carpool enrollment request to create a user profile; and  
means for sending at least one available match based on the carpool enrollment request to the user.

16. (Original) The system of claim 15 wherein the means for obtaining the positional information of the moving vehicle comprises means for obtaining the positional information through a global positioning system.

17. (Original) The system of claim 15 further comprising:  
means for recording the positional information obtained for the moving vehicle; and  
means for transmitting the recorded positional information from the vehicle to the call center.

19. (Previously Presented) The system of claim 15 further comprising means for comparing the user profile to at least one subscriber profile, the subscriber profile including at least a carpool enrollment request.

20. (Original) The system of claim 19 further comprising means for generating a list of at least one subscriber profile that matches the user profile.

21. (Previously Presented) A method for providing car pooling assistance through a wireless communication system, the method comprising:

receiving a first user carpool enrollment request;

obtaining a positional information for a first user moving vehicle;

associating the positional information of the first user moving vehicle with the first user carpool enrollment request;

receiving a plurality of additional user carpool enrollment requests

comparing the positional information associated with the first user carpool enrollment request with the plurality of additional user carpool enrollment requests to determine a match; and

sending at least one match responsive to the first user carpool enrollment request based on the comparison.
